DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 43-83 are rejected under 35 U.S.C. 102(a) as being anticipated by either of US 7,364,691 B2 to Barker et al (Barker et al) or US 2007/0290419 A1 to Goodman et al (Goodman et al). Each of Barker et al and Goodman et al teach a direct smelting furnace including cooling panels and methods of mounting the panels in the embodiments of figures 3-13 in Goodman et al and figures 4-14 of Barker et al for example, including elongated arcuate cooling plates (31) comprising cooling tubes (37) mounted in a zig-zag pattern, where each panel includes a plurality of projections (42) and pins (43) interacting with protrusions (49) and planar discs (51) in the manner recited in the instant claims, thereby showing all aspects of the above claims.

Claims 43-49, 69-72 and 81-83 are rejected under 35 U.S.C. 102(a) as being anticipated by US 2005/0218569 A1 to Stastny et al (Stastny et al). Stastny et al teaches a furnace (2) which could be employed for direct smelting including cooling panels (Fig. 1 for example) and methods of mounting the panels including elongated cooling plates (1) comprising cooling tubes (5), where each panel includes a plurality of projections (6) and pins (13) interacting with protrusions (11) and planar discs in the manner recited in the instant claims, thereby showing all aspects of the above claims.

Claims 43-49, 69-72 and 81-83 are rejected under 35 U.S.C. 102(b) as being anticvipated by Japanese 2002-206107A (JP'107). JP'107 teaches a furnace (1) including cooling panels (2) and methods of mounting the panels in the embodiments of figures 1-6 example, including elongated cooling plates (2) comprising cooling tubes, where each panel includes a plurality of projections (8) interacting with protrusions (9) and planar discs (13, 14) in the manner recited in the instant claims, thereby showing all aspects of the above claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Kastler whose telephone number is (571) 272-1243. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
